# What are bots?

What bots are not:

- Artificial Intelligence Only

**Bots can be simple task automation utilities.**

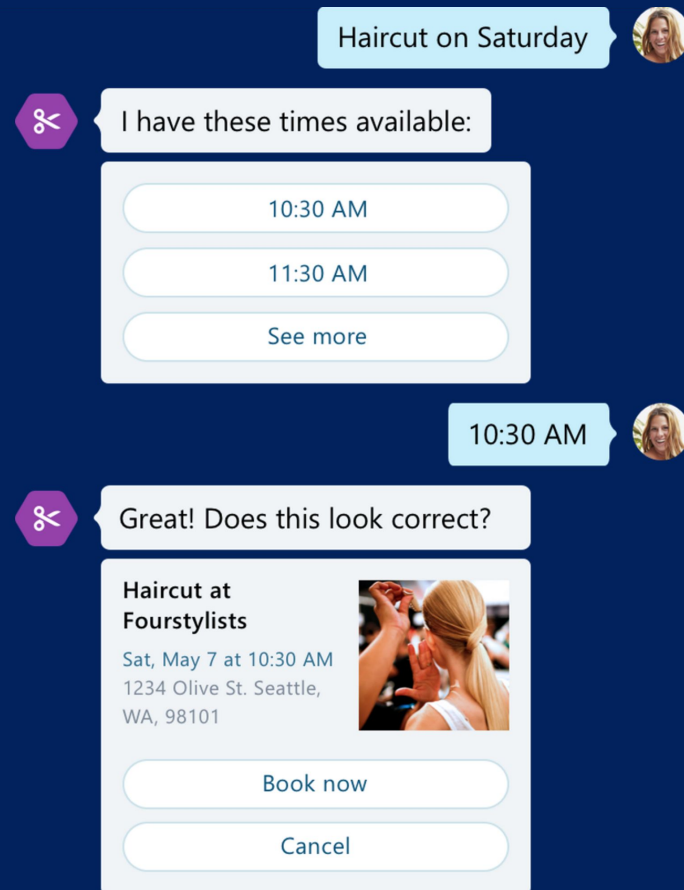

Examples:

Password Resetter

Stock Checker

Alarm Setter

Haircut Booker

# What are bots?

What bots are not:

- Artificial Intelligence Only
- Text interfaces only

**Bots can receive / transmit information without natural language.**

Examples:

Form flows, buttons, carousels, graphs & audio

Ready to get started? I live for travel and can dig up anything you need.

Type "Travel Advice", "Search Flights", or "Search Hotels" to get started.

Hotel in Miami from 9/1 to 9/3

I'm digging up hotels for Miami, FL for September 01 - September 03

I'm ecstatic about these hotels based on their prices, reviews and star rating.

**\$233: Royal Palm South Beach  
Miami, a Tribute Portfolio Resort**

7.5/10 - Good Reviews,

[See Hotel Details](#)

[See All Hotels](#)

[Search Flights](#)

**\$99: Hilton Miami Airport**

8.0/10 - Good Reviews,

[See Hotel Details](#)

[See All Hotels](#)

[Search Flights](#)

**\$167: Hotel Croydon by  
Beach Group Hotel**

8.4/10 - Excellent Reviews,

# *What are bots?*

What bots are not:

- Artificial Intelligence Only
- Text interfaces only
- Natural Language Processing only

**Don't attempt to solve the Turing test.**

Drive users as much as possible

Narrow scope

Use regular expressions

**JUST EAT**

# *What are bots?*

What bots are not:

- Artificial Intelligence Only
- Text interfaces only
- Natural Language Processing only

What bots are:

- Apps with a new interface

Faster Access

Available across more platforms

Less friction to build and deploy

More natural interactions

# *Bot's aren't new - Why are they blowing up?*

- Convergence of technologies
- Tools and intelligence services make building powerful bots accessible
- Ubiquity of communication channels

# *What is the Microsoft Bot Framework?*

Bot Framework is a **Microsoft operated service and SDK**.

Microsoft Bot Framework encapsulates a number of tools and services that can be used to build a complete bot.

Bot Builder (C#), LUIS (Language Understanding Intelligence Service) Cognitive Services, Speech Services, Azure...

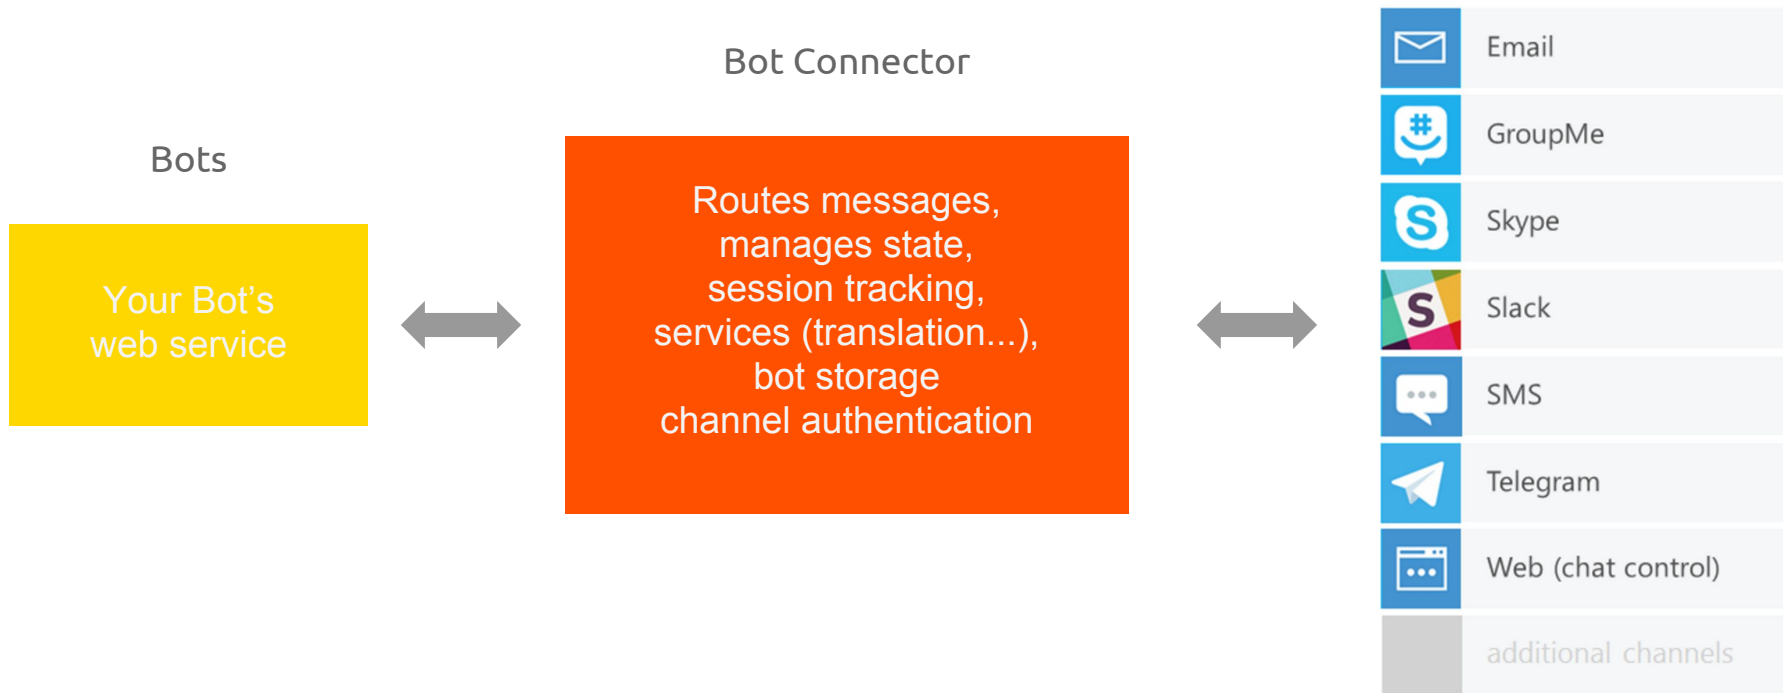

Cognitive Services

**JUST EAT**

# LUIS (Language Understanding Intelligence Service)

- Takes sentences written in natural language and interprets them in terms of the intention they convey.
- Uses active learning to improve itself over time (machine learning / supervised learning).
- Recognises and extracts “entities” from natural language.
- Exposed via a simple restful web service.

## *Example of a natural language query*

“Get news about virtual reality companies”

Intent: “FindNews”

Entity: “Topic”  
Value: “Virtual Reality Companies”

*Enough slides already!*  
*Let's build a bot...*

**JUST EAT**

# *Conversations as a platform?*

Under it all bots are just providing a conversational interface to your apps.

“Digital Assistants” like Siri, Cortana, Google Now and Alexa can be thought of as “Meta-Bots”.

Hi, I'm Cortana.

**JUST EAT**

*Thank you.*
